WEEK 1 | DUE 9 NOV 2026

Team charter and idea pitch

Two cross track problem ideas for a developer, cloud and security team

TEAM

Group 1

Software, cloud and cybersecurity

MEMBERS

Software

Boipelo Ramalepe, Lebogang Dolamo, Tumishang Lesufi

Cloud

Tshepang Matlonya

Cybersecurity

Patrick Chauke, Sherona Chigopweche

TEAM CHARTER

A small team can ship a useful, secure MVP

PURPOSE

Choose one real problem, test it with users, and build a focused prototype that demonstrates safe end-to-end delivery.

Goal by the pitch

Compare two problem ideas, name the user and pain point, and agree on a testable first release.

How we work

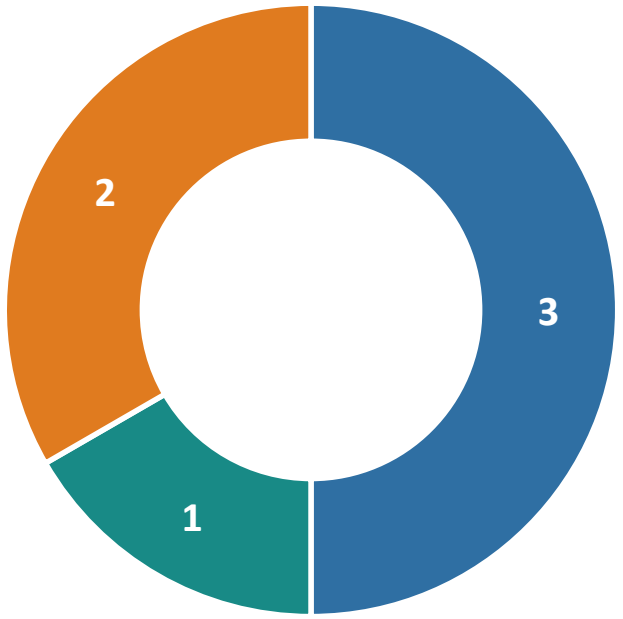

Share progress early. Keep tasks small. Pair across tracks on decisions that affect the whole prototype.

Definition of done

A demo works, setup steps are written down, key risks are reviewed, and each track can explain its contribution.

Clear ownership keeps the cross-track work moving

Team members per track

Software track

Own the user flow, interface and application logic.

Boipelo Ramalepe
Lebogang Dolamo
Tumishang Lesufi

Cloud track

Own the deployable environment, data storage, access configuration and operational notes.

Tshepang Matlonya

Cybersecurity track

Threat model the MVP, review authentication and data handling, and define basic checks.

Patrick Chauke
Sherona Chigopweche

Four team agreements keep every track aligned

Scope and interfaces

Agree on scope and interfaces together; record decisions in a shared note.

Blockers

Raise blockers in the next check in, or sooner if they affect another track.

Duties and review

Rotate note taking and demo duties; review each other’s work before merging.

Disagreements

Resolve disagreements by user value, effort and risk; ask the instructor when stuck.

PROBLEM IDEA 01

Idea 1: make suspicious email reports easier to handle

PHISHING TRIAGE

PROBLEM

Small teams may receive suspicious message reports through scattered channels, making it hard to track who reviewed them and what happened next.

PROPOSED MVP

A simple report form and triage queue. A reviewer records a verdict, priority and safe next step. No automatic link opening or live email ingestion in the first version.

MVP FLOW

Report form → **Triage queue** → **Verdict, priority, safe next step** → **Status history**

Developer

Report form, queue and status history.

Cloud

Deploy the app and store reports with least privilege access.

Security

Define safe handling rules, access controls and review checklist.

PROBLEM IDEA 02

Idea 2: catch risky cloud settings in a learning lab

CLOUD CONFIGURATION

PROBLEM

Learners and small teams can miss unsafe cloud settings when they configure a lab by hand and have no clear checklist or feedback.

PROPOSED MVP

A read only checklist or sample configuration scanner that flags a few chosen issues, explains why they matter and links to a safe fix. Start with mock or exported configuration data.

MVP FLOW

Mock or exported configuration data › **Checklist or scanner flags chosen issues** › **Finding explains why it matters** › **Link to a safe fix**

Developer

Show findings, severity and remediation guidance.

Cloud

Define a small sample environment and configuration inputs.

Security

Select checks, validate findings and document false positive limits.

DISCUSSION

Both ideas fit the tracks; validate access and scope first

	Phishing triage	Cloud config checker
Clear user pain	Reporter and reviewer handoffs	Missed risky settings in a lab
MVP boundary	Manual sample reports, human review	Few checks on sample data only
Main risk	Handling sensitive email content	Cloud access and noisy findings
First validation	Observe a sample triage task	Test detection on two configs
Dependency	Access to representative users	Safe sample configurations

NEXT STEPS

Week 1 ends with a shared choice and pitch

Confirm people and track owners

Replace placeholders and agree on one point of contact.

Check the problem with a user

Run a short conversation or task walkthrough for each idea.

Select and bound the MVP

Name the first user, core workflow and what stays out of scope.

Submit the evidence

Team charter and pitch slides due 9 November 2026.
